

SIMATS ENGINEERING
ASSESSMENT TOOL 1: Short Answer Test

COURSE NAME: Cloud Computing and Big Data Analytics **COURSE CODE:** CSA15

COURSE OUTCOME COVERED

CO1: Apply cloud computing technologies including hardware-software evolution, virtualization, web services, and service models to develop cloud-based solutions. (BL2)

Assessment Tool Weightage: 40%

Dave's Taxonomy: Imitation (Level 1)
Question Count: 5

Total Marks: 25

Code of Conduct

I S. Pradeepsha 1925721374 (Name / Reg. No.) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: 

Assessment Tasks

Short Answer Test

1. Define cloud computing and explain any four characteristics that make it different from traditional on-premise computing.
2. Trace the evolution of cloud computing from hardware evolution to internet software evolution, and show how these changes enabled modern cloud platforms.
3. Explain the role of server virtualization in cloud computing. Differentiate between virtualization as an enabling technology and cloud computing as a service model.
4. Discuss the role of **data centers** in delivering cloud services..
5. Differentiate IaaS, PaaS, SaaS, and XaaS with one suitable real-world example for each model.

Course name: cloud computing

SHORT ANSWER TEST.

Name: P. Prateeksha

Reg no: 192572137

Course code: CSA1508

Date: 21/7/26

(O.I. ASSESSMENT TOOL - 1)

1) cloud computing

cloud computing is the delivery of computing services such as servers, storage, databases, networking, software and analytics over the Internet on a pay as you - use basis.

Four characteristics:

1) on-demand self-service: users can access computing resources whenever needed without human intervention.

2) Broad Network access: services are available over the Internet. can be accessed from computers

3) Resources pooling: multiple users can share the same infrastructure.

* stores and analyze multiple virtual machines could run on a single physical server improving resource utilization.

* Internet software evolution: web applications and software as a service (SaaS) allowed software to be accessed through browser.

3. Server Virtualization in cloud computing :-

* Server virtualization in cloud computing is virtualizing the cloud computing virtualizer of server.

* virtualization is an enabling technology (server) whereas cloud computing is a service model.

* There is a difference between an virtualization and service model.

VIRTUALIZATION

CLOUD COMPUTING

A technology that creates virtual machines

A service model that delivers IT resources to the Internet

Focuses on efficient hardware utilization

Focuses on demand services

used within data centres

used by customers to access the computer services

4. Data centres:

*) Data centres are the centre of storing data in a database.

*) Role of data centres are delivering data in cloud computing where it is stored.

*) Cloud services is the delivery of computer resources, services, servers, network, software and analytics of Internet as you pay.

ROLES OF DATA CENTRE

*) Maintains users DATA or information.

INPUT

stores and process users data

Host cloud app actions and virtual activities.

cloud applications maintenance.

support scalability to meet changing user demands.

provide security using firewalls, encryption and access control.

	DESCRIPTION	EXAMPLE
IaaS
